

CONSIDERATIONS FOR HAUL ROAD AND ROAD CROSSINGS

- Considerations for the alignment of the haul route and crossing of Vipond and Gold Mine Roads:
 - Property ownership and easements
 - Land use
 - Safety for truck drivers and the public
 - Minimize noise
 - Minimize visibility
 - Minimize affects of crossing existing municipal services, roads, surface water and utilities
 - Avoid existing mine hazards such as stopes, crown pillars, raises and shafts to maximize safety around unstable ground conditions.
 - Topography was taken into consideration to minimize cuts and fills to optimize road grading
